CLEANROOM

Meeting increasing demands for controlled environment molding in the medical device and health care markets, Polymer Technology Corporation provides cleanroom molding (Class 100,000) at our molding facility in Menomonie, Wisconsin. For protected, hands-free transfer of molded components to the assembly workstations, robotic part removal works in concert with integrated automation moving the molded articles directly from the presses into the cleanroom without operator intervention. This creates a controlled assembly environment with a high degree of automation.
