(NEW WEB SITE)

MENOMONIE, WI — New Web Site Coming Soon to Polymer Technology

Polymer Technology Corporation, a custom injection molder specializing in accelerated tooling and molding technologies, welcomes the creation of a new web site to its marketing strategies.

Image elements played a dynamic role in the site's recreation. Photographs depicting sample programs and tooling operations, tell a story of a fast-paced company, helping others compete in a global business environment.

Three major sections were designed to target the interests of most users of Polymer's web site: Design, Tooling and Molding.

Redesign efforts are being made possible by the collaboration of ideas between Steve Johnson, VP and Breanne Wozniak, Graphic Design Intern.

Any comments or suggestions for the web site can be emailed to Steve Johnson.

(NEW INFO DESK)

MENOMONIE, WI – New “Info Desk” to Polymer Technology

Polymer Technology Corporation, a custom injection molder specializing in accelerated tooling and molding technologies, welcomes the creation of a new “Info Desk” to its web site as a resource aid.

The “Info Desk” is a one page resource with links to information and web sites to help clients understand not only the corporation’s capabilities, but the molding, design, and tooling processes in general.

One section, “Sample Programs” offers full color examples of products the company has helped create. All of the links, except the “Web Links”, are available in printable PDF format with one click of the mouse.

Design efforts are being made possible by the collaboration of ideas between Steve Johnson, VP and Breanne Wozniak, Graphic Design Intern.

Any comments or suggestions for the “Info Desk” can be emailed to Steve Johnson.

Why Polymer Technology?
Polymer Technology Corporation provides a “full service” solution for your molded part program requirements. Our state-of-the-art facility and technologies will exceed your expectation for quality, service, and value. We have integrated the latest in lean manufacturing technique, equipment, advanced process controls and automation systems to deliver precision components within budget and schedule. Meeting increasing demands for controlled environment molding in the medical device and health care markets, Polymer Technology Corporation provides cleanroom molding (Class 100,000).

(NEW CLEAN ROOM)

MENOMONIE, WI – Polymer Technology Adds Clean Room Molding Services

Polymer Technology Corporation, a custom injection molder specializing in accelerated tooling and molding technologies, announces the addition of clean room molding services for specialty medical molding and assembly applications.

Coupled with Polymer Technology's onsite mold making capabilities, the clean room addition will allow medically focused clients the opportunity to prototype, mold, assemble, and evaluate molded medical device components in a single sourced, compressed time format.

A short video presentation can be viewed by visiting the following web site link:

(NEW FACILITY)

MENOMONIE, WI -- Polymer Technology Expands To Larger Physical Facility

Polymer Technology Corporation, a custom injection molder specializing in accelerated tooling and molding technologies, has completed its move to a new manufacturing facility at:

5120 Parkway Drive, Menomonie, WI

The new facility expands Polymer's manufacturing site to 28,000 square feet and increases internal mold building facilities, molding operations, and assembly service capabilities.

Molding operations have been redesigned to increase capacity and boost efficiency. The existing Motan material handling system was significantly upgraded along with all process systems. On-site assembly services and warehousing were also redesigned and increased to meet future client capacity.

Also relocated on site is our internal Industrial Design Team, providing our clients with a "one-stop" solution to new molded part programs.
