

PROTOTYPE

We offer tooling systems to accommodate almost any molded prototype part requirement. Quick delivery tooling is available in P-20 tool steel and aluminum. We stock Unit Systems and Round Mate inserts to assure immediate availability of mold base components. This allows Polymer Technology to offer accelerated delivery on your prototype tooling program. Our on-site staff of tooling engineers and mold makers get the job done right, and done fast.

Prototype Tooling Systems

- Aluminum
- P-20 tool steel
- RTV molds
- Test plaque molds

Tooling

(PROFILE)

We have integrated the latest in lean manufacturing equipment and technique to provide globally competitive mold design/build services to our clients. Experienced tooling engineers, mold makers, and mold technicians staff our on-site tool making facility. Tooling is available in single, family, and multi cavity configurations. To assure quick delivery on new builds and mold repairs, we stock common mold bases and components.

Polymer Technology's engineering staff provides mold flow analysis to eliminate the guesswork traditionally required to get the best part and molding designs. Our design team utilizes Cimatron mold design software and the latest in CNC machining technology to quickly transform your 3D CAD part file into a high quality mold in the shortest possible time frame.
